

## Objectives of the course

Infiltratives are the Achilles's heel (weakness area) of the majority of facial surgeons that tend to believe that minimally invasive techniques are sort of too soft or simple for them. A common belief is that infiltratives should be kept inside the medical practice, but performed by a different physician than the surgeon him/herself.

Aesthetic physicians are frequently afraid of performing intermediate to advanced techniques, and tend to stay in their field of comfort with only partial resolution of the patients inestetisms.

There is a path that unify both visions; Volume & Expression

This course analyzes the different aspects of facial rejuvenation through infiltratives focusing on the intermediate to advanced techniques and discussing all the controversial and new trends within this area.

An important time is given to practical activities, and each of the assistants will have the time to perform the procedures under tutor guidance.

A full day of facial fat grafting with live surgery allows the audience to observe and learn the newest technologies regarding the use of fat in the face, and a multiexpert panel will present the highlights of the procedure to get reliable and reproducible results.

A facial volume analysis and treatment protocol is provided, making the difficult, simpler.

**No matter what is your level, you will come back with knowledge and skills you would not imagine possible.**

# Volume & Expression Advanced Course on Facial Lipofilling Techniques Fillers and Botulinum Toxin

## Theoretical-practical Course (live surgery) for Surgeons & Aesthetic MD

Limited to 30 participants

### Course Director

**Dr. Sebastian Torres Farr**

Maxillofacial - Aesthetic Surgery

### Location

DOMIMEDICA - ROME

JULY 18th - 20th 2013

## WELCOME

Dear Colleague and Friend,

Why organizing another course on facial infiltratives? *Volume & Expression* is a different course concept, because it pushes the pace to the limit, analyzing all the controversial aspects of the techniques and presenting them in an extremely didactic and practical way. The model, proven successful in Spain, is now available in Italy, being an honor to invite you to *Volume & Expression Rome*, which is structured in 3 days, with one segment on fillers, one on facial fat grafting and one on botulinum toxin.

The course is limited to only 30 attendants, for though a great emphasis is put into the practical activities, which allow each physician to take as much as possible, right back into their practice.

You will be astonished with the benefits from the course, taking your surgical skills to the next level.

- **Day 1** Analyzes the different aspects of volume augmentation through infiltratives, describes all techniques from basic to complex, and gets deep into the weak spots, such as pain management, adverse events and complex patients. Intense practical silicone model and patient treatments are shown.

- **Day 2** Facial fat grafting segment, introduce you to the latest advances regarding the use of fat in the face, to obtain the most consistent and reliable results. Time is given to present the new Sharp needle intradermal fat grafting (SNIF) and mesofat techniques. Live surgery is performed to set the theory into practice.

- **Day 3** Intermediate to advanced botulinum toxin techniques are revealed, highlighting the importance of dilutions, and exposing the off-label indications, adverse events and practical applications.

One of the most important aspects of the course is that analyzes the face as a whole and teaches you to read the volume and predict the changes in time. Video demonstrations, live surgery, patient's treatments, and more...

"Rome, was not built in one day, but allow us to show you the latest and more complex *volume & expression* techniques in three".

It is always good to have an excuse to come to Rome... Come and join us in July, you won't regret it!

**Intended audience :** Plastic Surgeons - Facial Plastic Surgeons

Maxillo Facial Surgeons - Otorhinolaryngologists - Oculoplastic Surgeons

Dermatologists - Aesthetic MD

**The fee includes :** Certificate, Live Surgery DVD, Notebook, Group photo,

V&E Surgical Cap, Coffee breaks, Lunches, End Course Dinner.

## COURSE PROGRAMME

Day 1: Intermediate & Advanced techniques on fillers

(Thursday, July 18th)

Facial harmony and beauty - Facial anatomy applied to infiltratives

Facial aging - Fillers - Infiltrative techniques - Adverse events

The complex patient - Silicone model and patient treatment demo, and practical techniques for attendants

Day 2: Facial fat grafting course and live surgery (Friday, July 19th)

Histology and physiology of the adipose tissue

Cutaneous improvements with fat grafting

Facial lipofilling anesthesia, extraction - Processing, technique and results

Sharp needle intradermal fat grafting (SNIF), mesofat, and subcision

Platelet rich plasma

Live surgery case 1: Facial fat grafting full face

Live surgery case 2: Snif, mesofat and subcision

Day 3: Intermediate & Advanced techniques on botulinum toxin

(Saturday, July 20th)

Botulinum toxins, generalities, types, adverse events

The technique - Botulinum toxin: a matter of dilution - off label indications

Botulinum toxin in hyperhidrosis - Silicone model and patient treatment demo, and practical techniques for attendants

**Official Language :** English (Simultaneous translation to Italian)

**Schedule:** 830-1300 ; 1400-1800

**Course fee:** 2000 €

**Course fee for EAFPS members:** 1800 €

**Course fee for EACMFS members:** 1800 €
