HANDS-ON CADAVER INTENSIVE COURSE IN ORTHOGNATHIC SURGERY AND ANCILLARY PROCEDURES

INTRODUCTION

The treatment of dento-maxillofacial deformity with orthognathic surgery has undergone a profound revolution during the last years. The reach - and hence the objectives - of this kind of surgery have been redefined to cover three basic pillars: the correction of the underlying malocclusion and skeletal base discrepancy, upper airway management, and harmonization of facial esthetics. This hands-on course aims to provide participants with a comprehensive practical overview of all techniques of the orthognathic surgery spectrum, including ancillary procedures to optimize esthetic results.

PROGRAMME

Clinical anatomy

Accelerated orthodontics:

- Corticotomies

Maxillary osteotomies:

- One-piece LeFort I osteotomy
- Segmented (three- or four-piece) LeFort I osteotomy
- SARPE
