# FINAL PROGRAM

The accent will be on practical cadaver dissections in the Institute of Anatomy Graz. Conditions for flap raising and dissection will be similar to those of the living human body due to fixation technique of the cadavers by the method according to Prof. Thiel (Graz).

Theoretical lectures will be short to have time to harvest flaps and to transfer the flaps to certain defects. The transfer procedure will be of main interest.

This two-day course will stress on microsurgical flap harvesting and pedicle flaps as second line procedures.
