

Thiel Cadaveric Free Flap Reconstruction Course

17 - 19 November 2015

Faculty:

Mr Douglas Kennedy, Mr Omar Quaba, Mr Jai Manik, Mr Kishore Shekar – All Ninewells.
Mr Colin McIver, Mr Craig Wales – Both Glasgow. Mr Madhav Kittur – Swansea.
Mr Mark Singh – Gloucester. Mr Atul Kusnale – Poole.

This new three day course will aim to provide trainees with a wide exposure to free flaps. There will be 5 work stations and the number of participants will be restricted to 9. This will allow ample opportunity for delegates to “see one, assist one and do one” for each of the flap.

The tutors on the course have a wide range of experience and we hope to bring a multidisciplinary approach with OMFS, ENT and Plastic Surgeons teaching. The delegate to tutor ratio is expected to be 1:1 per work station.

The course is suitable for all trainees in OMFS, Plastic and ENT with an interest in free flap reconstruction.

The Cuschieri skills centre is one of the few using the Thiel embalming technique for preservation of human cadavers. The advantages of this are that it maintains features of the live body, particularly with regard to the authenticity of colour, tissue consistency and flexibility. There is also the added advantage of reduced risk of infection, minimal odour and reduced deterioration compared to fresh frozen cadavers.

CPD Points have been applied for from the RCSEd.

Course Fee: £1500 (Includes the course dinner on 18 Nov 2015)

Thiel Cadaver Free Flap Reconstruction Course

Day 1 - Tuesday 17 November 2015

Time	Subject	Tutor
09.30	Registration and Change into Greens
