Interdisciplinary Treatment of Disorders of the Facial Skeleton

Primary and Secondary Treatment of Clefts of Lip, Alveolus and Palate

13th Joint Symposium Universities of Riga and Rostock 5th to 7th of May 2016

Hörsaal und Seminarzentrum CUK,
Universitätsmedizin Rostock,
Rostock University, Germany

Dear honored colleagues,

we cordially invite you to the next Joint Symposium Riga-Rostock. This 13th meeting will take place in the city of Rostock lies on the Baltic Sea and enriched by the traditional cooperation and exchange of the Baltic Universities.

The main topics of this meeting are interdisciplinary treatment and correction of facial skeletal disorders as well as secondary treatment of patients with clefts of lip, alveolus and palate. We have selected these topics with special regard to modern and well established techniques like computed surgical planning and piezosurgery. We are very encouraged to have so experienced specialists with us and hope that the meeting will be just as successful.

In addition, presurgical treatment of CLAP again, i.e. nasolalveolar molding and following interdisciplinary therapies have to be focussed ones more. Paying attention to growth and function in youngest patients will surely influence later therapeutic necessities in adolescence. Onemore we would like to hear and discuss free papers as well as those concerning plastic and plastic reconstructive surgery of the head and neck.

During the common two days we in Rostock would like to share our common expertise for interdisciplinary treatment. We hope that your presentation will enrich our common knowledge in results of specialization and individual treatment strategies. It will be a pleasure and honesty for us to welcome you in Rostock.

Papers can be announced up to 31st of January 2016.

With kind regards, Yours

Prof. Dr. Dr. B. Frerich Prof. Dr. A. Skagers
Dr. Dr. J.-H. Lenz Prof. Dr. Ilze Akota
