AOCMF Symposium—Advances in Orthognathic Surgery May 5–7, 2016, Vienna, Austria

During this symposium, state-of-the-art orthognathic surgery is discussed with an exclusive scientific circle of speakers from around the world. The main topics include: “Surgery First versus Orthognathic First, New Aspects in Treatment”, and “Contouring the Shape of the Face—Molding of the Angle of the Mandible, Chin, and Zygoma.”

In addition to functional corrections, the increase of aesthetic demands worldwide is enlarging the scope of orthognathic surgery. Esthetic and technical aspects in orthognathic surgery are also discussed as well as OSA treatment, cleft lip, and nose surgery.
