3RD INTERNATIONAL SYMPOSIUM ON MEDICATION RELATED OSTEONECROSIS OF THE JAWS (MRONJ)

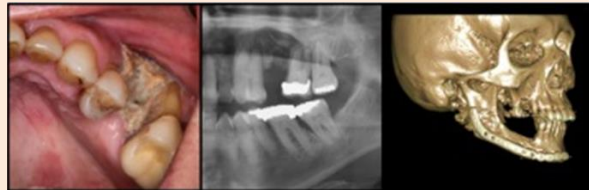

On November 15, 2019, 7:30-17:00 the 3rd International symposium on medication related osteonecrosis of the jaws is to be held in Copenhagen, on the initiative of the Department of Oral Maxillofacial Surgery, Rigshospitalet, Copenhagen University Hospital, Denmark.

MRONJ is a severe complication to antiresorptive treatment with Bisphosphonate, Denosumab and some chemotherapeutics. MRONJ may cause loss of teeth and jawbone, chewing function as well as the quality of life. The antiresorptive medication is used for osteoporosis and bone metastases in various cancer diseases.

The Symposium is targeted dentists, OMF-surgeons, specialists, clinicians, students and trainees with interest in MRONJ.

For this symposium we have gathered 13 highly recognized European experts from Germany, England, Italy, Greece, Switzerland, Norway, Sweden and Denmark. Based on the latest evidence, these experts will give an update and discussion on:

- Classification
- Clinical manifestations
- Imaging
- Pathogenesis
- Prevention
- Referral of patients with MRONJ
- When and how to treat

Chairman: Dr. Morten Schiodt, Department of Oral Maxillofacial Surgery, Rigshospitalet, Copenhagen University Hospital

Website: For program, presentation of speakers and practical information, please visit: www.rigshospitalet.dk/MRONJ
