Hands-on model workshop in English, for surgeons and restorative dentists

Panel discussions with KOL and International Workgroup

CADskills bv conducts the sixth workshop on the concept of reversed engineered 3D printed subperiosteal implants (AMSJI) for the upper jaw. The workshop includes instructions for a fully digital workflow starting from a scan prosthesis, video surgery and A-Z model surgeries.

The participants will be instructed about the wax-up, the imaging, the surgical and prosthetic steps, and the aftercare.

The participants will receive a certificate that entitles them to perform the treatment without further assistance of an AMSJI experienced surgeon. They will be able to participate in a multi-center clinical study.

We invite both surgeons and dental practitioners to participate.

The fee of €550 includes all didactic material, sandwich lunch and dinner. CAI Academy and EACMFS members receive 25% reduction on registration fees.

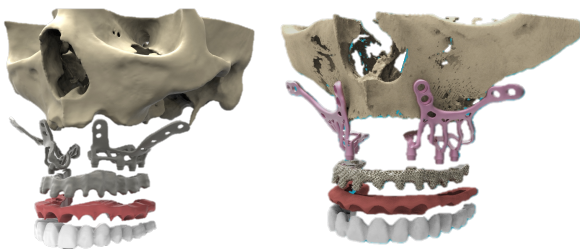

Programme

10.00 Welcome - Introducing the concept
10.45 Commented video surgery
11.15 Clinical step by step procedure (surgery & prosthetics)
12.30 Lunch
