Valentino Valentini, Sapienza University of Rome, Rome, Italy

Emanuele Zavattero, University of Turin, Turin, Italy

Register and learn from the best

Gain practical insights into contemporary orbital surgery through expert-led discussions on trauma, reconstruction, oncology, and functional outcomes. Challenge conventional thinking, explore current controversies, and strengthen your decision-making in complex orbital cases.

Key topics

- Orbital trauma and reconstruction
- Surgical anatomy and decision-making
- Digital planning and navigation
- Patient-specific implants
- Orbital tumors and deformities
- Functional complications
- Pediatric orbital trauma
- Multidisciplinary orbital care
- Current controversies in orbital surgery
- Case-based discussions and expert debates

Registration and Information

Standard Ticket: EUR 239 Member Ticket: EUR 119

Venue: Università degli Studi di Ferrara - Nuovo Polo Didattico di Cona, Via Aldo Moro, 22 44121 Cona, Ferrara, Italy

Seminar language: English

“It is my great pleasure to welcome you. This seminar brings together leading experts to explore the full spectrum of orbital surgery—from trauma and reconstruction to tumors, functional outcomes, and emerging technologies. Together with my co-chair, Prof. Majeed Rana, and an outstanding faculty, we have developed a program designed to stimulate critical thinking, multidisciplinary discussion, and scientific exchange. We look forward to an engaging day of learning, collaboration, and collegial networking.”

**Prof. Manlio Galiè
St. Anna Hospital & University of Ferrara, Italy**
